Day 12: The same amount, or not? Prove it

Name _____ Date _____

I can tell if two fractions are the same amount and prove it with a drawing.

The line stack. Every line goes from 0 to 1. Mark on these lines today.

The question. Can $\frac{1}{2}$ be written as tenths? As thirds? How do you know?

Tenths: _____ Thirds: _____

How I know: _____

Example 1. Are $\frac{3}{4}$ and $\frac{9}{12}$ the same amount? Prove it on the lines.

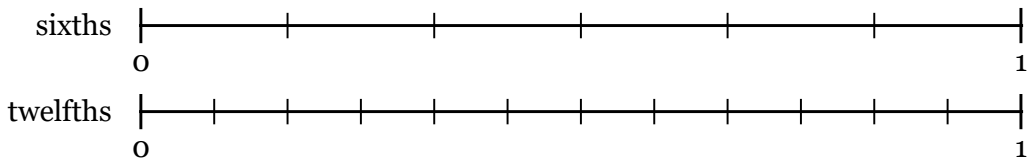

Each part was cut into ___, so there are ___ times as many parts and each part is smaller. The length is the same, so ___ = ___.

Example 2. Are $\frac{2}{5}$ and $\frac{5}{12}$ the same amount? Prove it on the lines.

___ and ___ are not the same amount: the points do not line up.

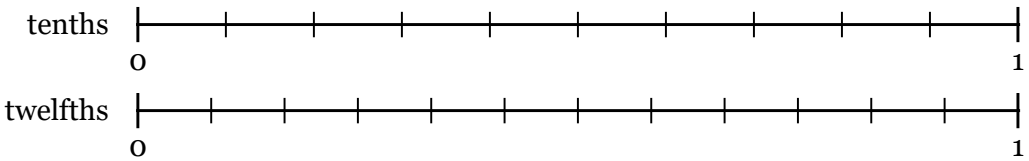

Same or not? Mark both fractions. Circle one.

Pair 1. Are $\frac{5}{6}$ and $\frac{10}{12}$ the same amount? the same / not the same

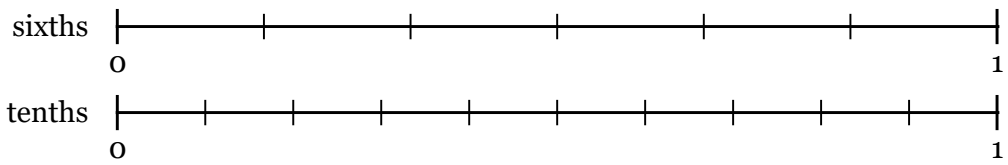

Curio Class, grade 4 math, day 12, version draft 1, not ready, not yet taught, CC BY 4.0, curioclass.org

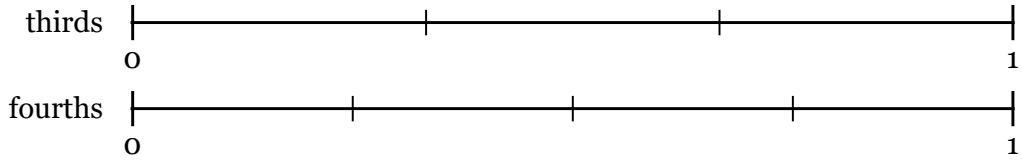

Pair 2. Are $\frac{3}{10}$ and $\frac{5}{12}$ the same amount? the same / not the same

Pair 3. Are $\frac{3}{6}$ and $\frac{5}{10}$ the same amount? the same / not the same

Pair 4. Are $\frac{1}{3}$ and $\frac{2}{4}$ the same amount? the same / not the same

Jo's claim. Jo says $\frac{3}{4} = \frac{5}{6}$ because she added 2 to the top and the bottom. Do the lines agree? What went wrong: _____

Kai's claim. Kai says $\frac{2}{5}$ and $\frac{4}{10}$ are different amounts, because 4 and 10 are bigger. What went wrong: _____

Written task. Explain why $\frac{3}{4}$ and $\frac{6}{8}$ are the same amount. You may draw.

Challenge. Which of these can name $\frac{1}{2}$: thirds, fourths, fifths, sixths, eighths, tenths, twelfths? Write each name.
