Day 14: Group the parts

Name _____ Date _____

I can group the parts and get a name with smaller numbers.

Example 1. A strip from 0 to 1 is cut in twelfths. 8 twelfths are shaded. Put the twelfths in groups of 2. Then put the sixths in groups of 2. Write each new name.

■	■	■	■	■	■	■	■				

8/12 = ____/6 = ____/3 Each group of 2 sixths is 1 _____.

Example 2. A strip from 0 to 1 is cut in tenths. Each tenth is cut into 10 hundredths. 50 hundredths are shaded. Group the hundredths in tens. Then group the tenths to make halves. Write each name. Each box is 1 tenth, or 10 hundredths.

■	■	■	■	■					

50/100 = ____/10 = ____/2 To make halves, each group has ____ tenths.

Fix it. Each answer is wrong. Say what went wrong. Then do it right.

1. Lu says $\frac{4}{8} = \frac{2}{6}$. He took 2 from the top and 2 from the bottom.

■	■	■	■				

   What went wrong: _____

   Right: _____

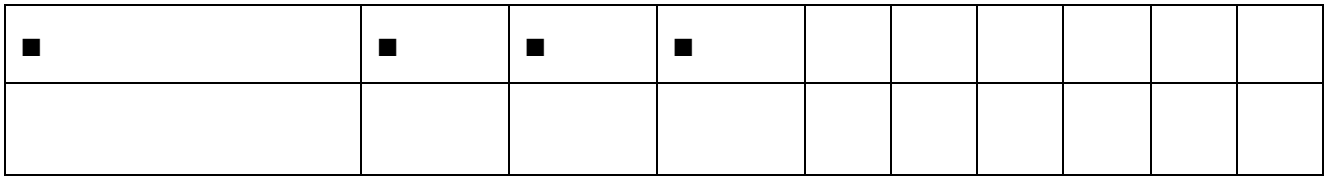

2. Max put the hundredths in groups of 10. He wrote $\frac{70}{100} = \frac{70}{10}$.

   What went wrong: _____

   Right: _____

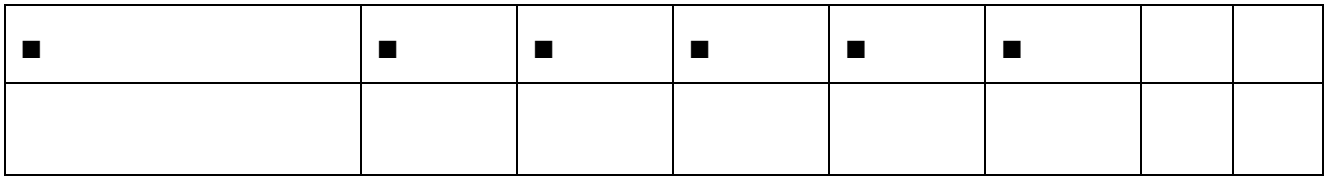

On your own. Circle the groups. Write the new name with ÷.

1. The strip is cut in tenths. 4 tenths are shaded. Group the tenths in twos. Write the new name.

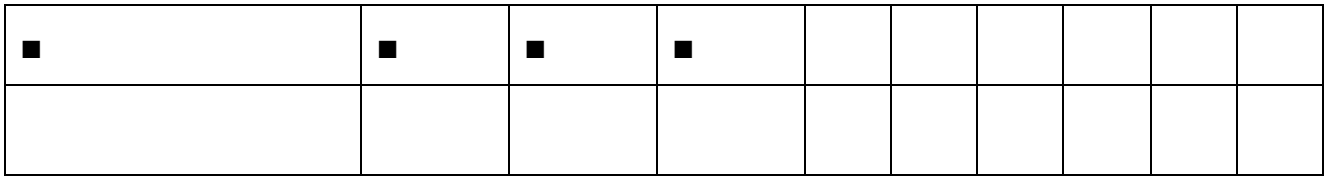

$4/10 = (4 \div __)/(10 \div __) = __/__$

2. The strip is cut in eighths. 6 eighths are shaded. Group the eighths in twos. Write the new name.

$6/8 = (6 \div __)/(8 \div __) = __/__$

3. 40 hundredths are shaded. Group the hundredths in tens. Then group the tenths to make fifths. Write each name. Each box is 10 hundredths.

$40/100 = __/10 = __/5$

Which ones? Circle each fraction that has a name with smaller numbers. Write that name: $\frac{5}{12}$, $\frac{6}{12}$, $\frac{7}{8}$, $\frac{10}{100}$.

Challenge. Which fractions from $\frac{1}{6}$ to $\frac{5}{6}$ have a name with smaller numbers? Write each name. How do you know you found them all?
