Day 20: Rename both fractions

Name _____ Date _____

I can rename both fractions when neither denominator fits the other.

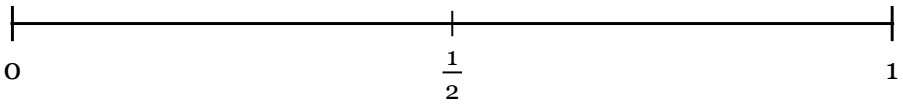

Warm-up.

1. List the multiples of 6 and of 9, up to 40. Circle the numbers in both lists.

   Multiples of 6: _____

   Multiples of 9: _____

2. Use the line. Write >, = or <: $\frac{2}{5}$ __ $\frac{7}{8}$. Is each more or less than $\frac{1}{2}$?

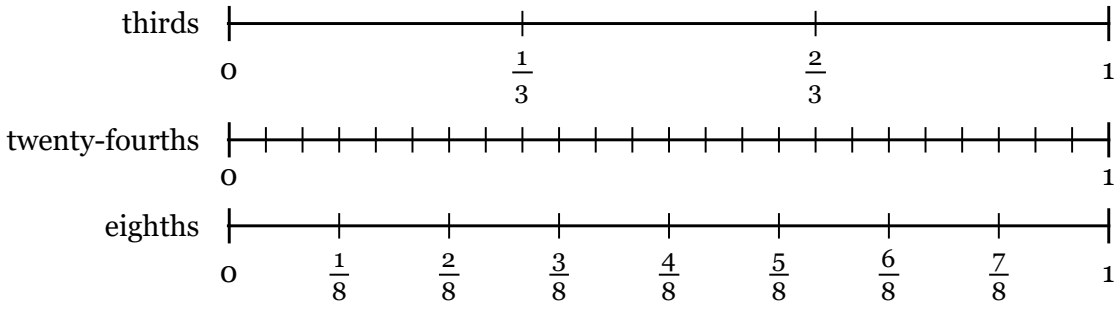

Example 1. Compare $\frac{2}{3}$ and $\frac{4}{5}$. Rename both so the parts are the same size.

Multiples of 3: _____ Multiples of 5: _____ In both: ____

2/3 = ____/15 4/5 = ____/15 So 2/3 ____ 4/5.

Example 2. Compare $\frac{3}{8}$ and $\frac{1}{3}$. Rename both so the parts are the same size.

Multiples of 8: _____ Multiples of 3: _____ In both: ____

3/8 = ____/24 1/3 = ____/24 So 3/8 ____ 1/3.

Fix it. Ivy's sign is right. Her working is wrong. Say what went wrong. Then do it right.

1. Ivy says: "$\frac{4}{5} = \frac{4}{30}$ and $\frac{5}{6} = \frac{5}{30}$. So $\frac{4}{5} < \frac{5}{6}$."

   What went wrong: _____

On your own. List multiples first. Rename both. Then write the sign.

2. Rename both, then write >, = or <: $\frac{5}{8}$ __ $\frac{4}{5}$

   In both lists: ____ ____ = ____ ____ = ____ So _____

3. Rename both, then write >, = or <: $\frac{2}{3}$ __ $\frac{3}{10}$

   In both lists: ____ ____ = ____ ____ = ____ So _____

4. Rename both, then write >, = or <: $\frac{9}{10}$ __ $\frac{4}{3}$

   In both lists: ____ ____ = ____ ____ = ____ So _____

5. Rename both, then write >, = or <: $\frac{5}{4}$ __ $\frac{7}{6}$

   In both lists: ____ ____ = ____ ____ = ____ So _____

Challenge. Find three numbers of parts that work for $\frac{5}{8}$ and $\frac{7}{12}$. Use one to compare them.
