Day 81: One equation, two comparisons

Name _____ Date _____

I can read a multiplication equation as a comparison, two ways.

Warm-up.

1. 64 ÷ 8 = ? _____	**2. 81 ÷ 9 = ?** _____	**3. 503 − 168 = ?** _____

Example 1. 12 = 3 × 4. What two comparisons does it show?

____ is ____ times as many as ____.

____ is ____ times as many as ____.

Equation cards. Finish both sentences for each card.

Example 2. 42 = 6 × 7. Finish both sentences.

____ is ____ times as many as ____.

____ is ____ times as many as ____.

1. 45 = 5 × 9

   ____ is ____ times as many as ____.

   ____ is ____ times as many as ____.

2. 7 × 8 = 56

   ____ is ____ times as many as ____.

   ____ is ____ times as many as ____.

Fix it. Ben is wrong. Say what went wrong. Then write it right.

Ben reads "12 is 4 times as many as 3." He writes 3 = 4 × 12.

What went wrong: _____

Right equation: _____

Six equations. Write both sentences. Then draw one strip picture on your strip sheet or grid paper.

1. $48 = 6 \times 8$

   ____ is ____ times as many as ____.

   ____ is ____ times as many as ____.

2. $2 \times 9 = 18$

   ____ is ____ times as many as ____.

   ____ is ____ times as many as ____.

3. $35 = 7 \times 5$

   ____ is ____ times as many as ____.

   ____ is ____ times as many as ____.

4. $8 \times 9 = 72$

   ____ is ____ times as many as ____.

   ____ is ____ times as many as ____.

5. $36 = 4 \times 9$

   ____ is ____ times as many as ____.

   ____ is ____ times as many as ____.

6. $3 \times 8 = 24$

   ____ is ____ times as many as ____.

   ____ is ____ times as many as ____.

Challenge. $49 = 7 \times 7$. How many comparisons does it show? Why?
