Stretch 10 record sheet: multiplicative comparison

One row a student, for days 79 to 89; print two for a class over 19. Each cell gets a tick; an error letter A to H (the unit openers); s for a slip (a fact or adding slip with the right setup); x for any other wrong answer; or a dash for not reached. R1 to R3: the readiness check, day 79. E80 to E87: the exits; on day 82 a tick means all three sentences, on day 86 both answers, on day 87 all three look-fors. End 1 to 8: the end check, day 88; items 7 and 8 take one tick for each look-for on the key (listed under the table), marked after class and handed back on day 89. Each head names the standard's part it records.

Student	R1	R2	R3	E80	E81 (a)	E82 (b)	E83 (e)	E84 (d1)	E85 (d2)	E86 (e)	E87 (f, g, h)	End 1 (a)	End 2 (b)	End 3 (c)	End 4 (d1)	End 5 (d2)	End 6 (e)	End 7 (f, g)			End 8 (h)		
																		1	2	3	1	2	3

End 7 look-fors: 1. writes one equation, or two steps joined, with a letter that stands for all the beads (part g); 2. does both steps: 4 × 20 = 80, then 20 + 80 (part f); 3. finds 100 beads

End 8 look-fors: 1. estimates with easy numbers from the story (about 50, about 20); 2. compares the estimate with 175 and says why 175 cannot be right; 3. finds s = 67
