Day 87: Two steps, one equation, one estimate

Name _____ Date _____

I can solve a two-step problem with a letter, then check by estimating.

Example. Ben's book has 70 pages. Amy's book has 4 times as many pages. Amy has read 135 pages. How many pages does she have left to read?

My letter ___ stands for _____.

Two equations: _____ _____

One equation: _____ Answer: _____

My estimate is about _____, so _____ makes sense.

Two steps. Name your letter. Write one equation. Solve it. Then estimate.

1. Jade has 60 stamps. Her aunt has 5 times as many stamps. Her aunt gives away 115 of them. How many stamps does her aunt have now?

Letter and equation: _____ Estimate: _____

2. A tower is 63 feet tall. It is 9 times as tall as a fence. A tree is 48 feet taller than the fence. How tall is the tree?

Letter and equation: _____ Estimate: _____

3. A farm has 7 goats. It has 6 times as many hens as goats. The farm sells 17 hens. How many hens are left?

Letter and equation: _____ Estimate: _____

4. A box holds 8 rows of 50 tiles. Mr. Diaz uses 286 tiles. How many tiles are left in the box?

Letter and equation: _____ Estimate: _____

5. Rae buys 4 packs of 90 cards. She already has 237 cards. How many cards does she have now?

Letter and equation: _____ Estimate: _____

6. Sam has 463 dollars. He buys 7 tickets that cost 40 dollars each. How much money does he have left?

Letter and equation: _____ Estimate: _____

Judge it. Makes sense, or far off? Ola _____ Gus _____ Ivy _____

Fix it. What went wrong?

Pia: _____

Kim: _____

Ed: _____

Mia. Mia says the answer to a problem is 12. Her estimate was 120. What should Mia do next, and why?
