Day 27: Wholes are parts too

Name _____ Date _____

I can take apart a fraction bigger than 1 using wholes, and show why it is right.

Warm-up. Find each in your head.

(a) $\frac{3}{12} + \frac{3}{12}$

(b) $\frac{3}{12} + \frac{3}{12} + \frac{3}{12} + \frac{3}{12}$

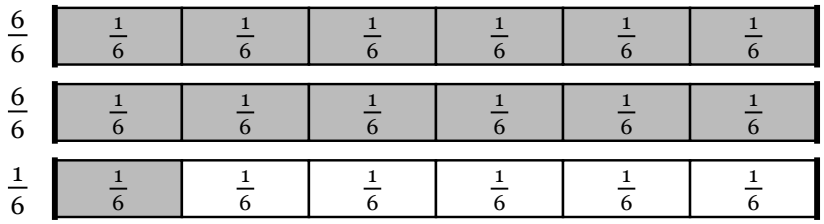

(c) $\frac{6}{12} + \frac{6}{12} + \frac{6}{12}$

Facts group. Find each: 7 + 5, 16 − 8, 8 + 9, 14 − 6, 5 + 9, 13 − 4

Example 1. Lay sixth-pieces on a whole strip until it is covered. Write 1 as sixths.

One whole is ____ pieces of size ____, so 1 = ____.

Example 2. Write $2\frac{1}{6}$ as a sum that uses $\frac{6}{6}$ for each whole. Then write it as one fraction.

2 1/6 = ____ + ____ + ____ = ____

Example 3. Make $\frac{10}{6}$ with sixth-pieces. Fill a whole strip first. Write $\frac{10}{6}$ as a whole and sixths.

10/6 = ____ + ____ = 1 + ____

Fix it. The answer is wrong. Say what went wrong. Then do it right.

1. Jo wrote $2\frac{1}{3}$ as one fraction. Jo put the 2 and the 1 on top: $2\frac{1}{3} = \frac{3}{3}$.

   What went wrong: _____

   2 1/3 = ____ + ____ + ____ = ____

Wholes and parts.

2. Lay fourth-pieces on a whole strip, then 3 more. Write $1\frac{3}{4}$ as a sum that uses $\frac{4}{4}$ for the whole. Then write it as one fraction.

   Sum: _____ One fraction: _____

3. Write $2\frac{2}{6}$ as a sum that uses $\frac{6}{6}$ for each whole. Then write it as one fraction. Mark it on line 9.

   Sum: _____ One fraction: _____

4. On line 7, mark the halves by eye. Write $3\frac{1}{2}$ as a sum that uses $\frac{2}{2}$ for each whole. Then write it as one fraction.

   Sum: _____ One fraction: _____

5. (a) Write $\frac{10}{4}$ as one whole and some fourths.
   (b) Write $\frac{10}{4}$ as two wholes and some fourths.

   (a) 10/4 = _____ (b) 10/4 = _____

Lee's sum. Lee says $1\frac{2}{4} = \frac{1}{4} + \frac{2}{4}$. Is Lee right? Show with a drawing.

Challenge. Write $\frac{9}{4}$ as wholes and fourths in every way you can. How do you know you have them all?
