Day 3: Factor pairs with no tiles

Name _____ Date _____

I can find all the factor pairs of any number to 100, even pairs not in my times tables.

Example. Find all the factor pairs of 48 with no tiles.

1: _____ 2: _____ 3: _____ 4: _____

5: _____ 6: _____ 7: _____

Factor pairs: _____

___ and ___ are a factor pair of 48, because ___ × ___ = 48.

Every shape. Find all the factor pairs of 72 and of 90. For each number of rows, write fits, with ___, or no. Mark the turn.

Rows	**72**	**90**

Factor pairs of 72: _____

Factor pairs of 90: _____

Fix it. The list is wrong. Say what went wrong. Then do it right.

1. Rosa says the factor pairs of 42 are 1 × 42, 2 × 21 and 6 × 7. She says she is done.

   What went wrong: _____

Write.

2. Write how you know when to stop looking for factor pairs of 64.

Challenge. Lee says 6 × 14 = 84, so 3 × 28 = 84 too. Is Lee right? How do you know?
