Day 14: Group the parts

Name _____ Date _____

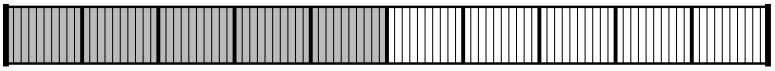

I can group the parts and get a name with smaller numbers.

Example 1. A strip from 0 to 1 is cut in twelfths. 8 twelfths are shaded. Put the twelfths in groups of 2. Then put the sixths in groups of 2. Write each new name.

$\frac{8}{12}$ 

8/12 = ____/6 = ____/3 Each group of 2 sixths is 1 _____.

Example 2. A strip from 0 to 1 is cut in tenths. Each tenth is cut into 10 hundredths. 50 hundredths are shaded. Group the hundredths in tens. Then group the tenths to make halves. Write each name. Each heavy line marks 1 tenth, or 10 hundredths.

$\frac{50}{100}$ 

50/100 = ____/10 = ____/2 To make halves, each group has ____ tenths.

Fix it. Each answer is wrong. Say what went wrong. Then do it right.

1. Lu says $\frac{4}{8} = \frac{2}{6}$. He took 2 from the top and 2 from the bottom.

   $\frac{4}{8}$ 

   What went wrong: _____

   Right: _____

2. Max put the hundredths in groups of 10. He wrote $\frac{70}{100} = \frac{70}{10}$.

   What went wrong: _____

   Right: _____

On your own. Circle the groups. Write the new name with ÷.

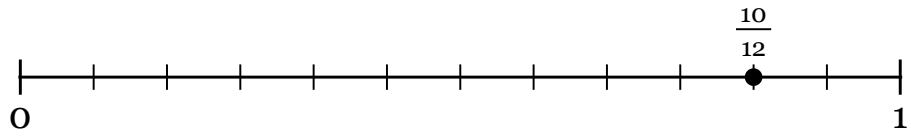

I put the parts in groups of ____, so I divide both numbers by ____.

1. The strip is cut in tenths, with $\frac{4}{10}$ shaded. Group the tenths in twos. Write the new name.

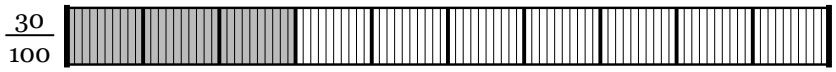

4/10 = (4 ÷ ___)/(10 ÷ ___) = ____/____

2. The line from 0 to 1 is cut in twelfths. The point is at $\frac{10}{12}$. Group the twelfths in twos. Write the new name.

10/12 = (10 ÷ ___)/(12 ÷ ___) = ____/____

3. The strip is cut in hundredths. $\frac{30}{100}$ is shaded. Group the hundredths in tens. Write the new name. Can the tenths be put in equal groups again?

30/100 = (30 ÷ ___)/(100 ÷ ___) = ____/10

Again? _____

Which ones? Circle each fraction that has a name with smaller numbers. Write that name: $\frac{5}{12}$, $\frac{6}{12}$, $\frac{7}{8}$, $\frac{10}{100}$.

Challenge. Which fractions from $\frac{1}{6}$ to $\frac{5}{6}$ have a name with smaller numbers? Write each name. How do you know you found them all?
